Internal Consistency and Predictive Validity of the Customized Employment Job Development Fidelity Scale

Tim Riesen [A01675240] - CPD Faculty

September 25, 2020

Background

The purpose of the study, is to continue the validation process and conduct an exploratory data analysis of scored DFSs to determine (a) if items on the DFS accurately and reliably measure the discovery construct (internal consistency) and (b) to determine whether scores on completed DFS correlate to valued employment outcomes for individuals with significant disabilities.

Sample

I have 17 completed DFS's and corresponding outcome data

Hypothesis

RQ1: Do items on DFS accurately measure the discovery construct? RQ2: Is there a relationship between scores on the DFS and valued employment outcomes achieved by a customized employment job seeker?

Progress

Data has been collected
