

Request #: 434 - PSY - Publication/Article
PMTO RCT in Mexico City

Melanie Domenech Rodriguez [A00309676] - PSY Faculty

December 04, 2019

Background

This is the antecedent project to the one we just completed. It was a clinical trial where participants were in one of two schools (a control school and a treatment school). The school status was selected at random.

Sample

The data are collected.

Hypothesis

Parents in the treatment group will show more improvements in parenting practices and children will show more improvements in child outcomes than parents/children in the control group.

Parenting practices will mediate the relationship between treatment condition and child outcomes.

Progress

Statistical analyses that look a lot like what you saw prior :/

Request

I'm seeking your collaboration! :) Running analysis and reviewing write-up of results.

Timeline

As soon as possible, but realistic. We will draft deadlines with you and I will have data ready by the time of our meeting.
