

Request #: 446 - COMD - Publication/Article
The Long-Term Stability of the Electrical Stapedial Reflex Threshold

Cache Pitt [A00924039] - COMD Faculty

January 31, 2020

Background

It was a retrospective review of a cochlear implant programming tool (eSRT) to see if it changes or stays constant over time.

Sample

205 charts

Hypothesis

That eSRT stays relatively stable over time.

Progress

It is complete and has gone for publication. One of the reviewers has a question about statistical analysis that I don't know how to respond to. The person who did our statistical analysis at the time of the project is not available to refer to.

Request

I need someone to help me take a look at the reviewers comments, see if I need to make modifications or provide clarification to the reviewer.

Timeline

My resubmission deadline is 2/28, so I need to begin working on a revision as soon as possible.
