

Request #: 438 - TEAL - Dissertation
implicit or explicit causal relations in text processing

Guoqin Ding [A02238071] - Doc Student (w/Kit Mohr)

December 11, 2019

Background

There will be two groups: bilingual and monolingual. they are reading two text types: with connective or without connective. Two versions of each text and the participants will be assigned to either one type of the text.

Sample

60 participant in total. 30 in each group.

Hypothesis

How bilinguals or monolinguals process expository texts with or without causal connectives measuring by eye-tracking?

Progress

I finished the introduction and literature review part and working on the method chapter.

Request

suggestions about the analysis method.
