

Request #: 548 - HDFS - Publication/Article

online discrimination

diana meter [A02260967] - HDFS Faculty

May 30, 2021

Background

Daily discrimination predicting four outcomes.

Sample

200ish participants.

Hypothesis

Day-to-day discrimination will affect day-to-day outcomes. Reviewer wants us to investigate NEXT day outcomes.

Progress

Done all within-day analyses (working on revision).

Request

A reviewer suggested using the daily diary data to predict the next day's outcome, rather than looking at within-day. I'm not familiar with doing this, and would love some help getting the data formatted to do this—I don't want to mess it up!

Timeline

ASAP. We were given 30 days for the revision.
