Request #: 523 - PSY - Publication/Article

Perception and imagery: A systematic review

Sarah Pope [A02345578] - Doc Student (w/Kerry Jordan)

February 18, 2021

Background

There is a large body of research that examines imagery ability alongside cognitive processes (perception, working memory, etc.), yet there is no (at least none to my knowledge) review of these associations. My current project is looking at perception (e.g., stimulus detection) and imagery ability via a systematic review.

Sample

We have started gathering articles and tracking the words we use in the search engine and the results that populate from those choices. We have not begun detailed examination of the articles.

Hypothesis

I am looking for guidance on how to effectively and appropriately conduct a systematic review. I am not sure if I can do a meta-analysis.

Progress

We have only started compiling journal articles.

Request

I am looking for guidance on how to effectively and appropriately conduct a systematic review. I am not sure if I can do a meta-analysis.

Timeline

I have no deadline or time table at this time.
